ENCINITAS

Energy Efficiency

Spending too much on electricity and gas?

Holding off on installing solar systems?

Thinking about getting an electric car?

Now may be the time to move forward on making your ***home more energy efficient.***

To promote energy efficiency, environmental stewardship, and sustainability; the City of Encinitas has eliminated or reduced permitting fees for:

- Solar Photovoltaic home systems
- Solar water heating home systems
- Electric Vehicle Supply Equipment (EVSE) for home charging
- Clean Natural Gas (CNG) systems for home refueling

The program waives permitting fees for basic installations of these energy efficiency systems and ***reduces permitting fees*** by an equivalent amount for larger and more complex installations.

City permit fees may never be lower.

For more information and program details, please contact the City of Encinitas Planning and Building Department at (760) 633-2710.
